

Jhon Potestas Portfolio Build Brief

Codex-ready PDF based on the extracted structure of bryllim.com, with Jhon Potestas replacement content and implementation architecture.

Important implementation note: use bryllim.com as a reference for section order, layout rhythm, compact card-based presentation, timeline style, project previews, recommendations, gallery, contact area, and chat-widget concept. Do not copy exact private assets, wording, images, branding, or personal claims. Rebuild the UI with Jhon Potestas content and original styling decisions that are clearly inspired by the reference.

Cybersecurity project update: the Facebook Keylogger project has been completely removed from the portfolio brief and should not appear in the homepage, project page, gallery, or project filters.

1. Reference Portfolio Summary

Reference URL: <https://bryllim.com/>. The reference portfolio presents a modern personal developer brand using a vertical single-page layout with supporting pages for expanded tech stack, projects, certifications, and blog. The homepage emphasizes identity, credibility, skills, proof of work, social proof, and contact conversion.

Reference element	Extracted detail from Bryl Lim portfolio	Purpose to copy structurally
Hero	Profile image, name, location, AI / Software Engineer / Content Creator tagline, achievement badge, Schedule a Call, Send Email, Read my blog.	Immediate identity, credibility, and calls to action above the fold.
About	Full-stack software engineer summary, technologies, business impact, developer community, AI focus.	Professional positioning and current technical direction.
Developer card	DEVS ONE HUNDRED access-card style block with member identity.	Visual identity card that breaks up text and adds personal-brand credibility.
Experience	Reverse timeline from current AI roles back to first line of code.	Narrative career progression.
Tech Stack	Grouped categories with View All link.	Scannable skill proof and expandable detail page.
Recent Projects	Compact project cards with View All link.	Proof of work without overloading the homepage.
Certifications	Compact credential cards with View All link.	Credibility and authority.
Recommendations	Multiple testimonials from mentors, peers, students, and professors.	Social proof and trust.
Memberships	Professional associations.	Institutional/community credibility.
Speaking and contact	Available for speaking, email, schedule CTA, blog link.	Conversion section and opportunity capture.
Gallery	Image grid of personal/professional moments.	Personality and real-world proof.
Chat widget	Chat with Bryl appears near the footer/bottom area.	Conversational contact feature.

Source basis: public crawled pages for bryllim.com homepage, tech-stack page, projects page, certifications page, and blog page were used to define this reference summary.

2. Before and After Replacement Map

Section	Bryl Lim reference	Jhon Potestas replacement
Name	Bryl Lim	Jhon Potestas
Location	Metro Manila, Philippines	Davao Del Sur, Philippines
Main title / tagline	AI \ Software Engineer \ Content Creator	Student \ Junior App Developer \ Junior Web Developer
Hero image	Professional/profile image	Professional photo placeholder; user will add image later.
Achievement badge	DICT OpenGov Hackathon 2025 Champion	Rescue Olympic 2nd Runner Up 2023; MTV Spoof Champion 2025
Hero buttons	Schedule a Call; Send Email; Read my blog	Send Email; Download Resume; Hire Me
Developer card	DEVS ONE HUNDRED Access Card / Founding Member / BRYL / Developer	Blank card-style placeholder; user will choose the card later. Keep same card-block concept.
About focus	Full-stack engineer, community, AI-powered solutions.	IT student, junior app/web developer, mobile apps, AI/LLM integration, AI agents, content creation, video editing.
Projects	CodeCred, BASE404, DIIN.PH, DYNAMIS, etc.	Pakman Lite 3D, Swaggy Adventure, RiderX, SmartLock, PokeTalk, Owly, SMCBI Document Tracking System. Facebook Keylogger removed.
Certifications	Huawei, Google, TestDome, Oracle, etc.	MTV Spoof Champion Award - DICT - 2025; placeholder row for future achievement.
Recommendations	Multiple professional recommendations.	One quote from Aidan Llyod, plus placeholder recommendation row.
Memberships	AAP and Philippine Software Industry Association.	SDRRMC, YouTube Automation Community, Facebook Automation Community, AI Community.
Social links	LinkedIn, GitHub, Instagram.	GitHub and Facebook now; LinkedIn blank for later.
Speaking	Available for software development and emerging technologies events.	Available for freelance projects, full-time work, collaborations, speaking, workshops, and open-source projects.
Chat	Chat with Bryl.	AI chat assistant powered through Cloudflare Worker using NVIDIA NIM or Groq.

3. Final Site Architecture and Stack

Use React because the site requires reusable sections, card components, dark/light mode, project filtering, animated timeline, view-all pages, and a floating AI chat interface. GitHub Pages can host the static React build, while Cloudflare Worker protects AI provider API keys.

Layer	Required choice	Notes for Codex
Frontend	React + Vite + Tailwind CSS	Build component-based sections and reusable UI cards. JavaScript is acceptable; TypeScript is optional.
Hosting	GitHub Pages	Deploy the static Vite build output. Configure base path if using project-site deployment.
AI Chat Backend	Cloudflare Worker	Handles AI chat API requests securely. Never expose NVIDIA NIM, Groq, or OpenRouter keys in frontend code.
AI Provider	NVIDIA NIM or Groq	Worker calls the chosen provider and returns safe responses to the React chat UI.
Styling	Tailwind CSS	Use dark mode class strategy, responsive grid, cards, badges, timeline, smooth scrolling.
Icons	Lucide React or similar	Use for buttons, tech stack labels, contact, social links, theme toggle, chat.
Animation	Framer Motion or CSS transitions	Use subtle reveal animations and timeline motion; avoid heavy effects.
Assets	public/assets or src/assets	Gallery images later in assets/Gallery. Profile photo and card image are placeholders.

Required architecture sentence for implementation: GitHub Pages hosts the React portfolio. Cloudflare Worker handles AI chat API requests securely. NVIDIA NIM or Groq powers the AI response.

5. Jhon Potestas Content Data

Hero Section

Field	Value
Name	Jhon Potestas
Location	Davao Del Sur, Philippines
Tagline	Student \ Junior App Developer \ Junior Web Developer
Profile image	Professional Photo placeholder. User will add later.
Achievement badges	Rescue Olympic 2nd Runner Up 2023; MTV Spoof Champion 2025
Hero buttons	Send Email; Download Resume; Hire Me

About Section - polished copy

I am an Information Technology student specializing in software development, currently learning, building, and exploring different areas of web, mobile, and AI-powered applications. I have foundational knowledge in web development using HTML, CSS, and JavaScript, and I have explored frontend and backend frameworks such as Bootstrap 5, Tailwind CSS, Next.js, and Laravel.

I also build mobile applications using React Native Expo and Flutter. Beyond software development, I create short-form video content and edit videos using CapCut for Facebook Reels and YouTube Shorts.

At the moment, I am focusing on mobile app development with AI and LLM integration. I am also experimenting with AI agents that can assist with small project subtasks, especially simple web development workflows. At the same time, I am improving my video editing skills by exploring Adobe Premiere Pro and After Effects.

Experience Timeline

Milestone / Role	Organization / Context	Year
SDDRC Member	Magsaysay Academy Inc.	2019
MDDRC Member	Municipality of Magsaysay	2023
BS Information Technology	St. Mary's College of Bansalan Inc.	2023
Started Coding	Personal learning milestone	2023
C++ and Java	Programming fundamentals	2023
Basic HTML, CSS, and JavaScript	Web fundamentals	2023
GitHub Integration	Version control workflow	2023
Bootstrap 5 and Tailwind CSS	Frontend styling frameworks	Late 2023
Game Development	Godot and game-building exploration	2024
PHP Language	Backend/web programming	2024
Laravel and APIs	Backend framework and API work	2025
Building Projects	Portfolio and capstone project development	Mid 2025

Tech Stack

Category	Technologies
Frontend	JavaScript, React, Next.js, Tailwind CSS, Bootstrap 5, Webpack, ESLint, Prettier
Backend	Node.js, Python, PHP, Java, Express.js, Laravel, MySQL
DevOps & Cloud	Firebase, Cloudflare Worker
AI & Machine Learning	Hugging Face, NVIDIA NIM, OpenRouter
Security & Identity	Leave blank for now
Developer Tools	Git, GitHub, VS Code, Antigravity, Cline, Codex, Discord

6. Projects

Do not include the removed Facebook Keylogger project. Recommended homepage preview should show 4 to 6 strongest projects, then link to View All Projects.

Project	Description	Tech used	Link
Pakman Lite 3D	A 3D game inspired by Pac-Man.	Godot, GDScript, Blender	https://github.com/jhon6264/Pakman-Lite
Swaggy Adventure	A 2D game inspired by Super Mario.	Godot, GDScript, Aseprite	https://github.com/jhon6264/Super-Mario
RiderX	E-commerce motorcycle platform.	React, Laravel Mix, Laravel, MySQL	https://github.com/jhon6264/RiderX
SmartLock	Mobile app integrated with ESP32 and Firebase.	React Native Expo, Script	https://github.com/jhon6264/Smart-Lock-V2
PokeTalk	Pokemon-themed chatbot that responds using an API.	PHP, API	https://github.com/jhon6264/PokeTalk-V2
Owly	Personal mobile app powered by an LLM.	React Native Expo, LLM	https://github.com/jhon6264/Owly
SMCBI Document Tracking System	Capstone project for document tracking.	React, Laravel Mix, Laravel, MySQL	https://github.com/jhon6264/SMCBI-Document-Tracking-System

Suggested homepage project order: SMCBI Document Tracking System, Owly, SmartLock, RiderX, Pakman Lite 3D, PokeTalk. Put all projects on a View All Projects page with filtering by category: Web App, Mobile App, Game, AI, Capstone.

Certifications / Achievements

Achievement	Issuer	Year
MTV Spoof Champion Award	DICT	2025
-----	-----	---

Recommendations

Quote	Name	Role / Company
Work smart, not hard, pero hunahuna-a sa kung ang pag-work smart nimo kay for short-term or long-term.	Aidan Llyod	Professor at St. Mary's College of Bansalan Inc.
-----	-----	---

Memberships / Communities

- SDRRMC

- Facebook Automation Community
- AI Community

Social Links

Platform	Link
GitHub	https://github.com/jhon6264
Facebook	https://www.facebook.com/jhoncrisopher.relativopotestas.7/
LinkedIn	Leave blank for now; user will set up later.

7. Layout and Component Requirements

The implementation should follow the same general section order and visual rhythm as the reference portfolio: compact hero, card-based sections, timeline, grouped tech stack, recent projects, certifications, recommendations, memberships, availability, contact, gallery, footer, and chat widget.

Component	Required behavior / design direction
Navbar	Sticky or simple top navigation with anchors: About, Experience, Tech Stack, Projects, Contact. Include theme toggle.
Hero	Centered or split layout with profile placeholder, name, location, tagline, achievement badges, and 3 CTA buttons.
Featured Card	A blank access-card style placeholder inspired by the reference developer card. Keep it visually prominent but empty enough for later content/image.
About	Use 2 to 3 compact paragraphs. Include software, mobile, AI, and content creation positioning.
Experience Timeline	Vertical timeline with year labels and milestone cards. Use subtle animation on scroll.
Tech Stack	Grouped cards by category. Hide blank Security & Identity category or show as Coming Soon, depending on final design. Include View All.
Projects	Homepage grid of selected project cards. Include filtering on full Projects page. Removed cybersecurity/keylogger project must not appear.
Certifications	Achievement cards plus placeholder entry. Include View All.
Recommendations	Testimonial cards with quote, person, and role. Include placeholder card for future recommendation.
Memberships	Simple compact organization/community list.
Availability	State availability for freelance projects, full-time work, collaborations, speaking, workshops, and open-source projects.
Contact	Email/contact form, Send Email button, Hire Me CTA, Download Resume CTA. Resume file can be placeholder in public/assets/resume.
Gallery	Responsive image grid loading from assets/Gallery. Use placeholders if no images exist yet.
Footer	Copyright for Jhon Potestas, social links, and small site description.
Chat Widget	Floating chat button. Opens chat panel. Frontend sends messages to Cloudflare Worker endpoint.

8. Required Features

- Dark / light mode toggle using Tailwind dark mode class strategy; remember preference in localStorage.
- Fully mobile responsive layout with single-column cards on small screens and multi-column grids on desktop.
- Floating chat button connected to Cloudflare Worker endpoint for AI responses.
- Contact form UI. For static GitHub Pages, either use mailto, a form service, or Cloudflare Worker endpoint later.
- Downloadable resume button linked to a placeholder PDF in public/assets/resume until the real resume is added.
- Blog link and Blog page placeholder, even if no posts are available yet.
- Project filtering on the full Projects page.
- View All pages for Projects, Tech Stack, and Certifications.
- Animated timeline and subtle section reveal animations.
- Smooth scrolling for anchor navigation.

9. Cloudflare Worker AI Chat Requirement

Do not expose API keys in React. Store provider secrets in Cloudflare Worker environment variables. The React chat widget sends user messages to the Worker, and the Worker calls NVIDIA NIM or Groq.

Frontend flow:

1. User clicks floating chat button.
2. Chat panel opens with greeting.
3. User sends message.
4. React POSTs to Cloudflare Worker endpoint.
5. Worker calls NVIDIA NIM or Groq securely.
6. Worker returns response.
7. Chat panel renders the response.

Worker should include basic CORS control, request validation, error handling, and a system prompt that describes Jhon Potestas portfolio information only.

10. Suggested site.js Data Shape

```
export const site = {
  name: 'Jhon Potestas',
  location: 'Davao Del Sur, Philippines',
  tagline: 'Student \ Junior App Developer \ Junior Web Developer',
  email: '',
  resume: '/assets/resume/resume.pdf',
  badges: ['Rescue Olympic 2nd Runner Up 2023', 'MTV Spoof Champion 2025'],
  socials: {
    github: 'https://github.com/jhon6264',
    facebook: 'https://www.facebook.com/jhoncrisopher.relativopotestas.7/',
    linkedin: ''
  },
  availability: ['Freelance projects', 'Full-time work', 'Collaborations', 'Speaking', 'Workshops',
    'Open-source projects'],
  // Add about, experience, techStack, projects, achievements, recommendations, memberships, and gallery
  // arrays here.
};
```

11. Final Build Checklist for Codex

- Create React + Vite + Tailwind project configured for GitHub Pages deployment.
- Implement layout inspired by bryllim.com using Jhon Potestas content only.
- Create all required sections and reusable components.
- Remove Facebook Keylogger completely from projects and data.
- Add placeholder professional photo area and blank featured card area.
- Add dark/light mode, smooth scrolling, responsive design, and subtle animations.
- Add full Projects page with filters and View All links from homepage sections.
- Add placeholder Blog page/link.
- Add AI chat widget that connects to Cloudflare Worker, not directly to provider APIs.
- Add deployment documentation for GitHub Pages and Cloudflare Worker environment variables.
- Use accessible buttons, readable contrast, semantic sections, alt text for images, and keyboard-friendly interactions.

12. Sources Used for Reference Extraction

Reference portfolio pages reviewed: bryllim.com homepage, /tech-stack, /projects, /certifications, and /blog. These pages were used only to extract layout and content strategy patterns, not to copy personal content or assets.
